It is developed by Microsoft Mobile, part of the Windows Phone division of Microsoft and marketed under the "Windows Phone" brand. Unlike Windows Mobile, the previous Windows Phone mobile operating system, Windows Phone 8 was designed from the ground up as a direct rival to Apple's iOS and Google's Android mobile operating systems, aiming to be a high end smartphone platform. Like Windows 8, it was designed to run the full desktop version of Windows 8 along with all third party software designed for Windows, as well as some Microsoft Office documents.[2] Windows Phone is also compatible with Microsoft's Xbox Live and Kinect motion sensing system. Windows Phone is also available on the Nokia N9 and N9 Pure Edition (also known as the N9-00/N9-01), as well as the Nokia Lumia 1320, Lumia 930 and Lumia 1520. All Nokia Lumias will be updated to Windows Phone 8.1 via Windows Phone 8.1 Update 1. Overview [edit] Windows Phone is based on Windows Phone 7.5 and Windows Phone 8, the previous versions of Windows Phone, which were based on the Microsoft Windows operating system. With its debut, Windows Phone made a clear break from its predecessor, offering a streamlined design and visual style with fast performance, along with native support for Microsoft Office documents. It was also Windows Phone's first platform to use modern user interface design principles, such as live tiles, swipe and tap gestures, and user-customizable home screens. In 2013, Windows Phone 8.1 was released, adding even more features and improvements. Windows Phone 8.1 Update 1 was released in November 2014, adding features such as Windows Hello, notifications and an improved camera app. Windows Phone is a single-core processor, with the exception of the Nokia Lumia 830, which has a dual-core processor. The OS is optimized for ARM chips, and does not support x86-based chips. Windows Phone is a user-modifiable operating system, as it comes preloaded with various applications and services. These applications are then 82157476af
